

Malaria Death in Africa:2000-2014

Malaria Killing Rate:

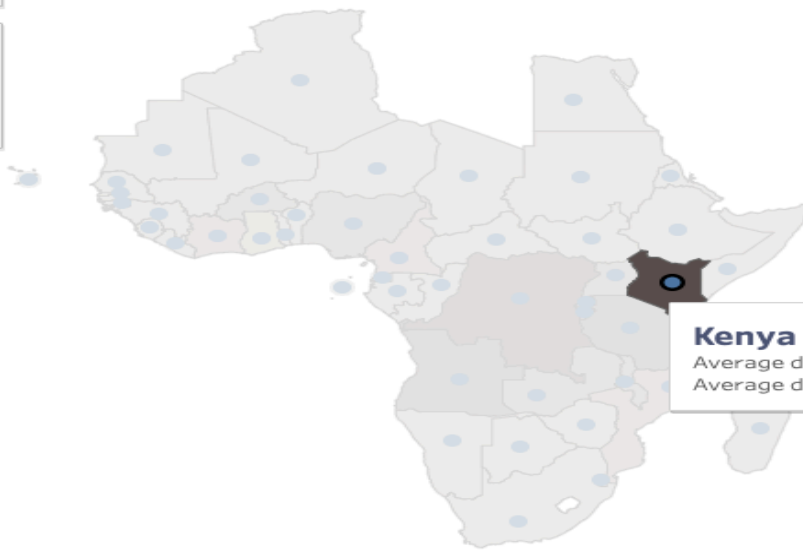

Malaria has been spread over African countries with huge numbers in deaths. In 2000, this epidemic killed thousand people. In Kenya, as we see here in this dashboard:

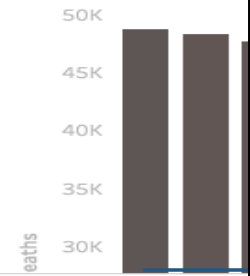

Malaria in Kenya:

Malaria killed between 45K and 50K people in 2000 and this number getting higher until 2003 number of deaths were more over than 50K, which mean number of deaths per day 76.43 as it shows in this dashboard here;

Which countries are most affected?

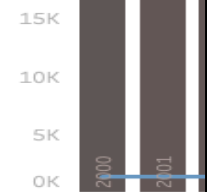

How have the number of malaria deaths changed over time in Kenya?

Kenya

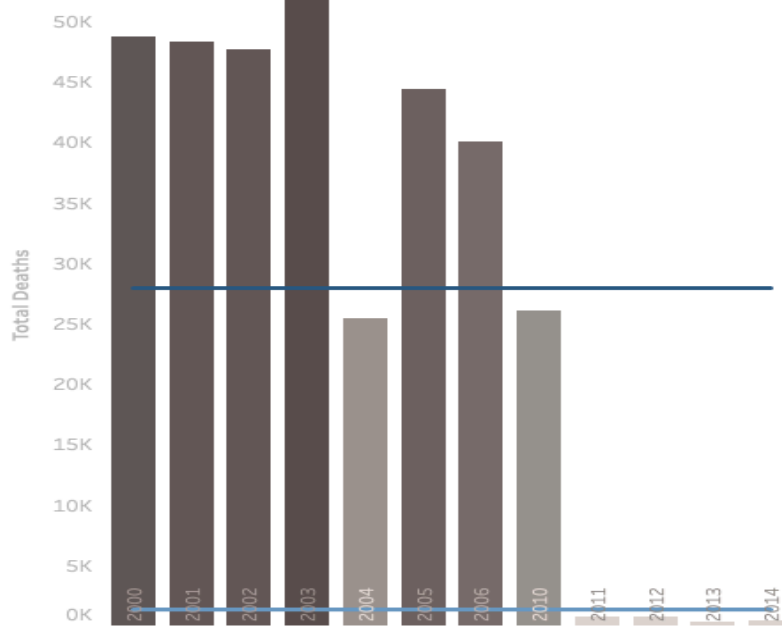

Average deaths every year: **27,896**
Average deaths every day: **76.43**

Darker shading marks a higher number of deaths caused by Malaria. Select a country on the map to explore how the number of malaria deaths have changed over time.

Africa Average

Country Average

Malaria in Democratic Republic of Congo:

But in Democratic Republic of Congo was the opposite.

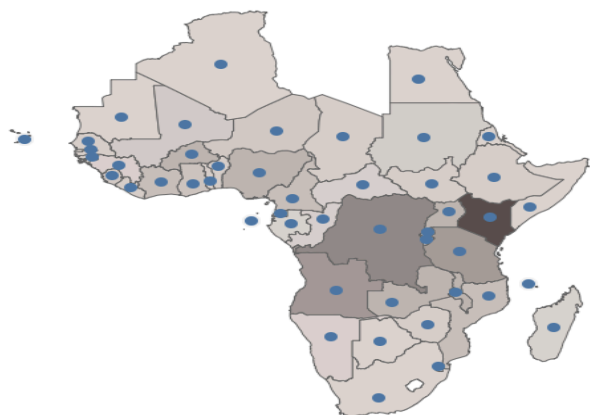

Democratic Republic of Congo doesn't have huge number of deaths in Malaria epidemic in 2000 or in the beginning but the number increased exponentially until 2013. We can see here in this dashboard how it goes increasingly and unsteady number of deaths which start with controlled number and ends with epidemic:

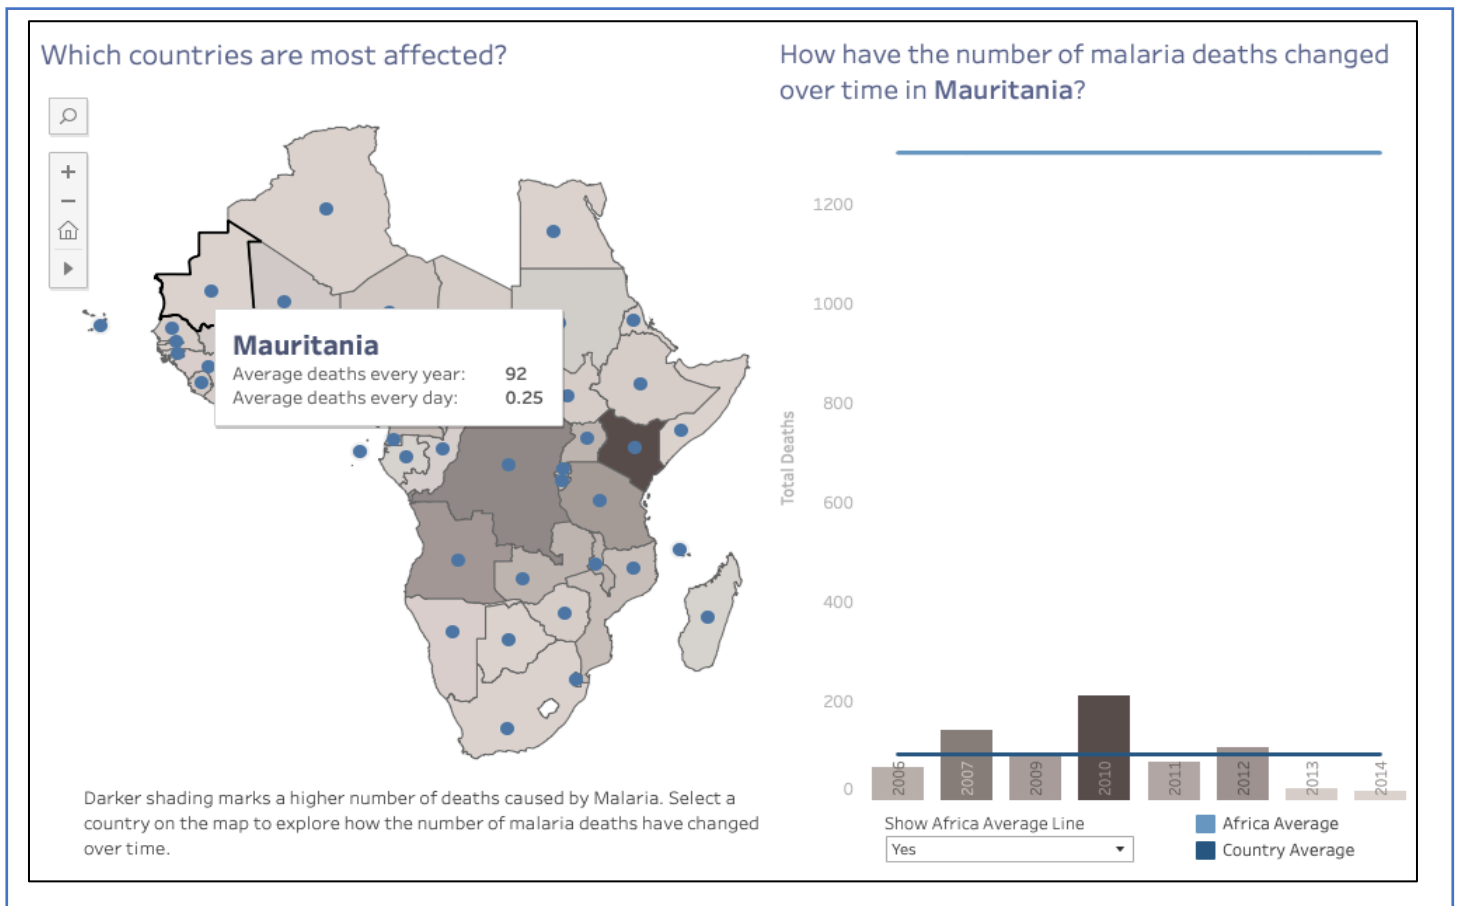

On other countries:

As we see in those countries such Kenya, Congo, Ethiopia, Angola, Tanzania and etc. which these countries were and until now are epicenter of this disease even some of them got healing. But on other hand, some of African countries are in a good state even had an affected by this disease but still have the control either. Let's have look on them;

Which countries are most affected?

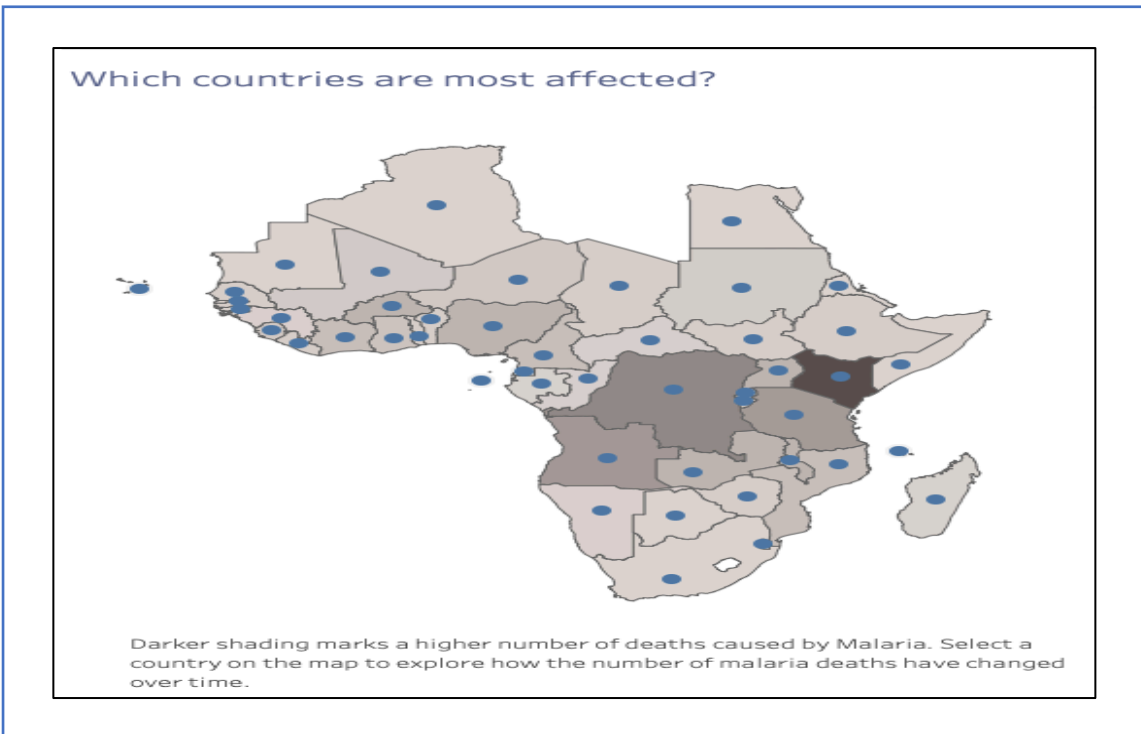

These countries are in light brown with regular number of deaths althrough years. For example Mauritania. The dashboard showed an analytics about the number of deaths and the average compared to the rest which it shows to you control the disease.

COMPARISON:

If we want to compare between Democratic Republic of the Congo and other African countries, we can say all countries has a controlled number of Malaria except Congo.

From the dashboard here you can see countries with different colors in brown shades starting from the dark brown to light brown and each shaded color represent the number of deaths per year and per day, which the dark shade represent the most affected dangerous country with high and huge number of deaths and it may out of control. Let's have a look;

At the end, the average althrough Africa was steady, controlled and managed except some of them was affected until now.
